

In the Light of ONE

Presents

7 Main Chakras Attached to your Endocrine System.

Ley Greywolf

This class will teach you how each chakra is connected to an area of life and to the physiology of the human body. Blockages or imbalances in a chakra create specific areas of physical, emotional, mental or spiritual dis-ease and personality traits or issues that can be brought back into balance and healed.

Some of the topics to be discussed:

- ❖ THE CHAKRAS AND HOW THEY ARE CONNECTED TO YOUR PHYSIOLOGY
- ❖ HOW TO INTERPRETE PHYSICAL SYMPTOMS
- ❖ METHODS FOR CLEANSING AND RE-ALIGN YOUR CHAKRAS

tools that correctly used, can increase the vibratory effect on the human physical, emotional, mental and spiritual bodies. Disturbances in the subtle energy of the chakras translate into physical manifestation and symptoms who are likely associated with the corresponding glands and organs. It is not to say that chakras are physical or physiological in nature. They are considered as energy centers that influence our being at many levels, including the physical and biological levels.

Whenever one of our energy centers is thrown off balance by a blockage, physical maladies can happen. It is important to remember that chakras function on the same principle as a pendulum. If one of them is underactive or overactive, signs will start to manifest that it's "out of rhythm". Chakra balancing is in order. The disturbance is felt either at the level of that specific or the level of another chakra or set of chakras connected to it. For instance, when the throat chakra is blocked you may experience sore throat, neck pain, or laryngitis. Similarly, when the heart chakra is out-of-sorts, high blood pressure and heart-related problems can arise.
